

(New) Claims

1. Packing consisting of a sleeve provided with a cavity, and a cap that can be connected to the sleeve, wherein in said cavity of the sleeve a container which has an outer surface and which is especially made of plastic or glass is arranged, preferably for receiving liquid and/or viscous substances to be dispensed by a dispensing device, and wherein said container is positively and/or non-positively fixed in a receiver in the region of the end of the sleeve directed away from the cap,
c h a r a c t e r i z e d i n
that the receiver includes two diametrically oppositely arranged elastically deformable pressure pieces (12) with a shape conforming the outer shell (14) of the container (3).
2. Packing according to claim 1,
c h a r a c t e r i z e d i n
that three pressure pieces (12) are arranged with equal distances to each other on arc of a circle.
3. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the receiver includes a continuous pressure piece having a recess in the central portion thereof and being elastically deformable at least in the region of walls of the recess.
4. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the receiver includes a cushion member (10) in the region of the bottom surface (6).

5. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the container (3) is glued inside the receiver.
6. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the container (3) includes an outer thread and the receiver a
corresponding inner thread.
7. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the sleeve (1) and the container (3) are formed as one piece.
8. Packing according to claim 1,
c h a r a c t e r i z e d i n
that above the receiver between the inner wall (11) of the sleeve (1) and
an outer shell (14) of the container (3) spacers (16) are arranged which
especially centre the container (3) within the sleeve (1).
9. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the dispensing device (4) is formed as a spray head, as a supported
dispensing ball or as a permeable tissue.
10. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the dispensing device (4) extends in the direction of the cap (8).
11. Packing according to claim 1,
c h a r a c t e r i z e d i n

that the cap (8) almost fully grips over the sleeve (1) and that the sleeve (1) has a finger rest (18) which is not covered by the cap (8).

12. Packing according to claim 1,
c h a r a c t e r i z e d i n
that the sleeve (1) includes a shoulder (7), of which the outer diameter substantially corresponds to the outer diameter of the cap (8).
